# 1 · INSTALL GUIDE

Installation takes about two minutes. You only need MetaTrader 4 on a Windows PC (or Mac/VPS running MT4).

1. **Unzip the download.** Right-click the zip → **Extract All**.
   Zip ko right-click kar ke "Extract All" karein.
2. **Open the indicators folder.** In MT4: **File** → **Open Data Folder**, then open **MQL4** → **Indicators**.
   MT4 mein File → Open Data Folder → MQL4 → Indicators kholein.
3. **Copy the indicator.** Paste **QFT_Sessions_Killzones.ex4** into the Indicators folder.
   QFT_Sessions_Killzones.ex4 file is folder mein paste karein.
4. **Refresh.** In the MT4 Navigator (Ctrl+N), right-click **Indicators** → **Refresh**.
   Navigator mein Indicators par right-click → Refresh.
5. **Attach to a chart.** Drag **QFT_Sessions_Killzones** onto your chart and press OK. M5 or M15 is best for setups. No DLL or extra permission is needed.
   Indicator ko chart par drag karein aur OK dabayein. Setups ke liye M5 ya M15 behtar hai.

> **Updating?** Remove the old indicator from the chart, replace the .ex4 file, press Refresh and attach it again so the new default settings load. Delete old copies such as "QFT_Sessions_Killzones (2)" so you never load an old version by mistake.

## WHAT YOU WILL SEE

**Session boxes:** blue Asia, green London and gold New York, each with its range in pips on top.

**Killzone strip:** a slim colour bar at the bottom of the chart for the Asian, London, New York and London Close killzones.

**PDH / PDL:** dashed lines at the previous day's high and low.

**Setups:** a green/red position box with one label such as **BUY WIN +3.4R**.

**Panel (top-left):** clock in PKT or IST, which session is open and for how long, the current or next killzone, and the setup results.

# 2 · FEATURES

SESSIONS
### Asia, London & New York boxes
Every session as a clean box with its high, low and range in pips.

ICT
### All 4 ICT killzones
Asian, London, New York and London Close killzones as a strip that stays in place while you scroll and zoom.

SETUPS
### Sweep → MSS setups marked
Finds the liquidity that was swept, waits for a strong market structure shift and marks entry, SL and target.

TARGETS
### Smart targets, minimum 1:2
Target = the other side of the session whose liquidity was swept; beyond it the move is ridden with a 3-candle rule.

RESULTS
### Win rate and total R
Each setup shows WIN +xR, LOSS -1R or OPEN; the panel adds up wins, losses, win rate and total R.

PAKISTAN & INDIA
### Clock in PKT or IST
Which session is open, when it closes, which killzone is next, all in your own time.

ACCURACY
### Daylight saving automatic
London and New York change clocks on different dates; the indicator follows both, day by day.

BROKER
### Server time detected
GMT+2/+3 brokers are detected automatically; a fixed offset can be set for others.

LEVELS
### Previous day high & low
PDH and PDL with prices, key liquidity for intraday traders.

DESIGN
### Premium panel, light & dark
Matches a dark or white chart automatically and stays sharp on high-resolution screens.

LEARNING
### Explains itself
Hover over any box, line or setup to read what it is and why it matters.

ALERTS
### Alerts & push notifications
Instant alert with entry, SL and target when a new killzone setup forms.

## HOW A KILLZONE SETUP IS MARKED

1. **Liquidity.** A session high/low (Asia, London, New York) or a swing high/low that no candle has broken yet.
2. **Sweep.** A candle inside a killzone wicks beyond it and closes back inside: the stop hunt.
3. **MSS.** Within a few candles a strong candle closes through the last swing on the other side.
4. **Entry.** At the close of the MSS candle. SL beyond the sweep. Target at least 1:2, or the other side of the swept session.

| WHAT HAPPENS | RESULT COUNTED |
|---|---|
| Stop loss hit before 1:2 | **LOSS -1R** |
| 1:2 reached, then price comes back to the entry before the target | **WIN +2R** |
| Target reached (for example the Asia high) | **WIN** with that target's full R |
| Price runs beyond the target | Followed until a candle closes back beyond the last 3 candles: the whole move is counted |

# 3 · TIMES & SETTINGS

## SESSIONS AND KILLZONES IN PAKISTAN / INDIA TIME

| SESSION / KILLZONE | PKT WINTER (NOV – MAR) | PKT SUMMER (MAR – OCT) | IST WINTER |
|---|---|---|---|
| Asia session (Tokyo) | **05:00 – 14:00** | 05:00 – 14:00 | 05:30 – 14:30 |
| London session | **13:00 – 22:00** | 12:00 – 21:00 | 13:30 – 22:30 |
| New York session | **18:00 – 03:00** | 17:00 – 02:00 | 18:30 – 03:30 |
| Asian killzone | **06:00 – 10:00** | 05:00 – 09:00 | 06:30 – 10:30 |
| London killzone | **12:00 – 15:00** | 11:00 – 14:00 | 12:30 – 15:30 |
| New York killzone | **17:00 – 20:00** | 16:00 – 19:00 | 17:30 – 20:30 |
| London Close killzone | **20:00 – 22:00** | 19:00 – 21:00 | 20:30 – 22:30 |

The indicator follows the exact daylight saving dates every year, so you never change anything by hand.

## MAIN SETTINGS

| | |
|---|---|
| **Clock time zone** | Pakistan (PKT), India (IST), broker server time or UTC. |
| **Broker server time zone** | Auto detect (recommended). Choose Fixed only for an unusual broker. |
| **Days to show / Days of setups** | How many days of boxes and setups are drawn. |
| **Setups in London / New York / London Close / Asian KZ** | Switch each killzone's setups on or off. |
| **Setups at any time** | Off by default. On = also outside killzones (more setups, lower quality). |
| **Minimum reward : risk** | Default 2 (1:2). The target is never closer than this. |
| **Stop loss buffer (x ATR)** | Room beyond the sweep. Uses ATR, so it fits Gold, forex and indices. |
| **MSS candle body (x ATR)** | Strength of the breaking candle. Higher = fewer, cleaner setups. |
| **Alerts / push notification** | Alert when a new setup forms; push to your phone if MT4 mobile is linked. |
| **Draw labels on top of candles** | Keeps labels readable. Your chart setting returns when the indicator is removed. |

> **Khulasa (Roman Urdu):** Indicator bilkul free hai. Asia, London, New York sessions aur ICT killzones Pakistan/India ke waqt mein dikhata hai, DST khud badalta hai, aur killzone mein liquidity sweep → MSS setup ki entry, SL, target aur natija khud mark karta hai. M5 ya M15 par lagayein, aur pehle demo par practice karein.

## TIPS FROM THE QFT TEAM

- Use the marked setups to **learn and backtest** the model on your own pair before you trade it live.
- Gold and the indices move most in the London and New York killzones; Asia is usually a range.
- Risk a small fixed % per trade. A 1:2 model can be profitable even with a win rate below 50%.
- Practise past killzones candle by candle with **QFT Replay Simulator** for MT4 and MT5 (free demo on our website).
