1 · INSTALL GUIDE

Installation takes about two minutes. You need MetaTrader 5 on a Windows PC (Mac or VPS running MT5 also works).

1. **Unzip the download.** Right-click the zip → **Extract All**.
   Zip ko right-click kar ke "Extract All" karein.

2. **Open the indicators folder.** In MT5: **File** → **Open Data Folder**, then **MQL5** → **Indicators**.
   MT5 mein File → Open Data Folder → MQL5 → Indicators kholein.

3. **Copy the indicator.** Paste **QFT_Trading_Coach.ex5** into the Indicators folder.
   QFT_Trading_Coach.ex5 file is folder mein paste karein.

4. **Refresh.** In the Navigator (Ctrl+N), right-click **Indicators** → **Refresh**.
   Navigator mein Indicators par right-click → Refresh.

5. **Attach to any chart.** Drag **QFT_Trading_Coach** onto one chart (any symbol, any timeframe). It reads the history of your whole account, not only that chart.
   Kisi bhi ek chart par drag karein. Yeh poore account ki history parhta hai.

6. **Tick "Allow DLL imports"** in the **Common** tab and press OK. This only lets the tool open the Windows "Save As" window and open your report; nothing is downloaded.
   Common tab mein "Allow DLL imports" tick karein, phir OK. Is se report save karte waqt jagah poochi jaye gi aur report khud khul jaye gi.

> **Important: load the full history.** MT5 shows only the history you ask for. In the **Toolbox** → **History** tab, right-click → **All History** once, so the coach can read all your trades. Without DLL permission the tool still works: reports are saved in **MQL5** → **Files** → **QFT Reports** and a popup shows the exact path.

THE PANEL

Period buttons	Today · Week · Month · 30 days · All.
Trade filter	All trades · Manual only · EA only (EA trades are found by their magic number).
Chart: on / off	Draws this symbol's trades on the chart: entry arrow, line to the exit, stop loss line and a label like **Grade A+ · 1.8R +$120** with any mistakes. Hover for full details.
Tabs	Overview · Mistakes · Time · Symbols · Exits · Risk sim · Plan.
Report buttons	**English report** · **Urdu report** · **Report card**. A Windows window asks where to save (Desktop, USB...), then the file opens by itself.
show less / show more	Click the top right of the panel to make it small (score, result and biggest leak only).

2 · FEATURES

AUTOMATIC

Nothing to type

Reads every closed trade from your MT5 history: entry, exit, lots, stop loss, result, swap and commission.

UNIQUE

9 mistakes found by itself

Revenge trade, bigger lot after a loss, no stop loss, risked too much, trading after the daily limit, overtrading, holding a loser, closing a winner early, trading near big news.

UNIQUE

What each mistake cost

The money result of the trades with each mistake, and "your result without mistakes".

DISCIPLINE

Discipline score 0-100

One number for how cleanly you followed good trading habits, with a weekly graph of your progress.

LEARNING

Grade A+ to F for every trade

Grades judge HOW you traded, not whether you won. A loss with a stop and correct risk can be A+.

COACH

Weekly coach plan

Three rules built from your own trades, sorted by how much money they can save.

STATISTICS

All the journal numbers

Win rate, profit factor, average R, result per trade, average win and loss, max drawdown, losing streak, best and worst day.

TIME

Sessions, hours and days

Asia, London, London + New York, New York: where you make and lose money.

SYMBOLS

Your best and worst pairs

Trades, win rate, profit factor and result for every symbol.

EXIT COACH

Best move and move against you

From real price data: how much of the best move you kept and the money left on the table.

PROP FIRM

Prop firm check

Your trades tested against 5% daily and 10% maximum loss rules: PASSED or FAILED.

RISK

Monte Carlo: next 100 trades

1000 simulations of your own trades: chance of profit, normal and worst drawdown, chance of losing half.

LIVE COACH

Warnings while you trade

Alerts for a possible revenge trade, a bigger lot after a loss, a trade without stop loss and the daily loss limit. Optional push to your phone.

REPORTS

English and Urdu reports

Colourful HTML reports with 12 graphs, a learning box under each, free lesson links, a glossary and a trade list. Save as PDF in one click.

SHARE

Report card image

A 1080 × 1080 picture with your score, result and biggest leak, ready for WhatsApp or Facebook.

PRIVACY

Your data stays on your PC

No account, no internet, no sign-up. Nothing is sent anywhere.

3 · THE 9 MISTAKES AND THEIR RULES

Every rule can be changed in the settings to fit your own trading plan.

MISTAKE	WHEN IT IS MARKED (DEFAULT)	WHAT TO DO
Revenge trade	A new trade within 15 minutes after a losing trade.	Take a 15 minute break after a loss.
Bigger lot after a loss	Lot more than 30% bigger than the last losing trade.	Keep the same risk after a loss.
No stop loss	The trade was opened without a stop loss.	Stop loss on every trade before you open it.
Risked too much	More than 2% of the balance at risk on one trade.	Risk 1-2% per trade; calculate the lot size.
Traded after daily limit	Opened after the day's closed loss reached 3%.	Stop for the day at the limit.
Overtrading	More than 2 × your average trades per day (never below 5).	Set a maximum number of trades per day.
Held a loser too long	A losing trade open 2 × longer than your average winner.	Respect your stop.
Closed a winner too early	Closed by hand while keeping less than 40% of the best move.	Let winners run or trail the stop.
Traded near big news	Opened within 15 minutes of high-impact news (MT5 economic calendar).	No new trades around big news.

Grade points: every trade starts at 100. No stop loss −40, revenge −25, trading after the daily limit −25, bigger lot −20, risked too much −20, held a loser −15, overtrading −10, news −10, closed a winner early −10, planned reward smaller than risk −10. A+ 95+, A 85+, B 70+, C 55+, D 40+, F below 40.

THE REPORT

Sections: coach plan · balance curve and drawdown · trading calendar · mistakes and their cost · grades and progress (last 30 days against the 30 days before) · sessions, hours and days · symbols · R distribution and exits · prop firm check and Monte Carlo · learning corner · full trade list.

4 · SETTINGS

Period / trades shown at start	Default: Last 30 days, all trades. Change any time with the panel buttons.
Folder for reports and cards	"QFT Reports" inside MQL5 → Files (the working copy).
Ask where to save, then open the file	On by default. Needs "Allow DLL imports" ticked.
Mistake rules	Revenge minutes, bigger lot %, max risk %, daily loss limit %, overtrading factor, held-loser factor, early-close %, news check and news minutes.
Prop firm check	Daily and maximum loss limits (5% and 10%).
Trades on the chart	On/off, maximum trades drawn, win and loss colours.
Live coach	Warnings while you trade, optional push notification.
Panel	Position (top left / top right), distance, start small.
Broker server time zone	Auto (recommended), GMT+2/+3 with US daylight saving, or fixed.

GOOD TO KNOW

R multiple uses the stop loss you set when the trade opened (MT5 does not keep later changes). Trades without a stop loss get no R. **News check** needs the MT5 economic calendar; if your broker has it switched off the panel shows "calendar n/a". **Exit coach** downloads M1 price data the first time, so it fills in after a few seconds. **Prop check** counts closed trades only.

Khulasa (Roman Urdu / Hindi)

- Bilkul free MT5 tool: aap ki trading history khud parhta hai, kuch type nahi karna parta.
- 9 mistakes khud pakarta hai aur batata hai ke har mistake se kitna loss hua.
- Har trade ka grade A+ se F, discipline score aur agle hafte ke 3 rules ka coach plan.
- "English report" ya "Urdu report" dabain: Windows poochta hai kahan save karna hai, phir report khud khul jati hai. PDF bhi ek click mein.
- Pehli dafa Common tab mein "Allow DLL imports" tick karein, aur History tab mein right-click → All History.
- Help ke liye WhatsApp karein: +92-323-6700010.

Education only, not financial advice. The coach looks at your past trades to help you learn; statistics and simulations do not guarantee future results. Trading forex, Gold and CFDs carries a high risk of loss.
